

SKINPEN SKIN REMODELLING Q&A

WHAT IS SKINPEN?

The SkinPen Precision is a skin remodelling device that creates micro-“injuries” to the skin to target natural collagen and trigger your body’s natural healing process. Skinpen Skin Remodelling is an advanced medical treatment, to treat scar tissue including acne and surgical scars, as well as rejuvenating skin to improve fine lines, wrinkles, pigmentation and overall skin appearance. The result is smoother, younger-looking skin.

The SkinPen procedures are performed in a minimally-invasive and precise manner with the use of the sterile needle head. Prior to treatment, topical anaesthetic is used to minimise discomfort. The procedure lasts around 30 minutes.

IS IT SAFE?

Yes, by design. SkinPen’s patented – and single-use – sterile needle cartridge is built with safety in mind. SkinPen is also surrounded by a custom-designed BioSheath that acts as a barrier to prevent cross contamination between procedures. That’s part of the reason SkinPen by Crown Aesthetics is the world’s first FDA-cleared microneedling device. Learn more by reviewing our patient labeling document.

HOW DOES IT WORK?

SkinPen creates hundreds to thousands of “micro” skin punctures per second to stimulate the skin’s natural wound healing process – inflammation, proliferation, and remodeling – to prompt tissue remodeling without causing scar tissue formation. Most patients can return to normal activities within 24 hours.

WHO SHOULD NOT USE IT?

SkinPen should not be used on patients who have active skin cancer in the treatment area(s); open wounds, sores, or irritated skin in the treatment area(s); an allergy to stainless steel or anesthetics; a hemorrhagic (bleeding) disorder or hemostatic (bleeding) dysfunction; are pregnant or nursing; or are currently taking drugs with the ingredient isotretinoin (such as Accutane). Talk to your doctor to see if this treatment is right for you.

SKINPEN SKIN REMODELLING Q&A

HOW MANY PROCEDURES ARE RECOMMENDED?

The number of procedures required will be determined by your therapist based upon your individual procedure goals and the health of your skin. We recommend a minimum of 3 procedures spaced about 4 weeks apart. We will develop a procedure plan specific to your needs and a maintenance plan to help maintain the rejuvenating effects. However, on scar tissue we will recommend a minimum of 6 treatments.

WHEN WILL I SEE RESULTS AND HOW LONG DO THEY LAST?

Following the treatment, you may see immediate smoothing in the first week. Additionally, you will continue to see improvement up to three to six months after your treatment as collagen continues to remodel. The best results are seen when three treatments are performed one month apart, however some people will benefit by having more than three treatments.

AM I A CANDIDATE FOR SKINPEN?

SkinPen is safe for patients of all ages and skin types. If you are interested in improving fine lines, wrinkles, acne scars or just want to rejuvenate tired-looking skin or achieve overall skin tightening – SkinPen is the right treatment for you!

WHY USE IT?

SkinPen is clinically proven to fight the appearance of neck wrinkles and reduce the appearance of acne scars. In fact, 90% of subjects in the clinical trial would recommend the treatment to friends and family. It's a minimally invasive procedure with little to no downtime. As the first FDA-cleared microneedling device, SkinPen sets the industry standard for safety.

WILL IT WORK FOR ME?

Unlike some alternatives, SkinPen has been clinically proven to be effective for women and men with all Fitzpatrick Skin Types I – VI. Likewise, unlike lasers or chemical peels that can damage skin over the long term, SkinPen treatments, when properly spaced and overseen by a physician, can be used for years.
